

Contactless key

We have all, many times, encountered a problem of finding the right key to open the entrance to our apartment building, or the problem that there is just too much things in our hands, so taking the key out becomes very uncomfortable.

Pic 1. Reader

SDD ITG offers a device that allows faster, more simple and safer building entry. This reader is mounted on the glass door from the inside.

We can change your old key with a new one, in the form of a card or a keyfob, which distinguishes it from the other keys. In addition to that, your BusPlus card can serve as a key also.

Simply, you need to place your card or a keyfob 5-7cm from the reader, which is linked to an intercom lock, and the door opens.

If you lose or damage your card or a keyfob, simply declare your lost card or a keyfob invalid and a new one will be issued.

The advantage of this device is that card (key fob) can not be copied, it is easy and convenient to use.

Other features of existing lock (and intercom, if exist) will remain in operation.

Slika 2. Different types of key fob

Note: SDD ITG is a manufacturer of equipment and technical solutions based on the RFID technology and software for access control and time attendance.
